

## POWER SUPPLY

With today's advanced peripherals and external expansion boxes, it's easy to overload the standard 35-watt A500 power supply. Applied Engineering now offers a heavy duty 100-watt power supply for the A500 to fill the needs of today's power user. Enough power to free you from having to disable an external disk drive to conserve power. The power supply runs at 110/220V  $\pm$  15% to accommodate European standards. Output is +5V (13A), +12V (2A), -12V (1A). Dual, front-mounted auxiliary and main power switches allow you to separately control an additional peripheral (printer, monitor, etc.) *one year warranty.*
